

## This week's assignment is all about ANATOMICAL TERMINOLOGY

Medical professionals use these terms every day in practice to describe the position of the body, or where an injury is located on/in the body. No matter what medical profession you choose to follow, these terms will be used across all disciplines!

### E-Learn Assignment for the Week of April 20<sup>th</sup>

1. **Google these terms/ define them for your own reference/use.**
2. **Take pictures or videos of your understanding of the word's definition. I have included a picture for anatomical position and buccal as examples. All 25 words must be accounted for in your assignment. One picture/video can have multiple definitions, be sure to define them to me like I did in the buccal example.**
  - a. **Take pictures/videos of yourself and/or family, make them as creative as you wish! Try to have some FUN!**
  - b. **Assignment is due Thursday April 23<sup>rd</sup>, 2020 by 5:00pm**
  - c. **Text/email me with any questions!**

Anatomical Position Example

Buccal Example

Anatomic Position: person is standing upright, facing forward, arms straight down by hips with palms facing out, feet are parallel and toes pointing forward
